

METHOD AND SYSTEM OF HEMOFILTRATION FOR REDUCING  
INFLAMMATORY MEDIATOR RELATED DISEASES

ABSTRACT OF THE DISCLOSURE

The present invention relates to a method and system  
for providing hemofiltration for reducing inflammatory  
mediator related diseases. In one form, a hemofiltration  
5 system for treating inflammatory mediator related  
diseases is disclosed. The system includes a hemofilter  
to receive blood from a specimen, the hemofilter removing  
selective inflammatory mediators from the blood and at  
least one therapeutic agent used in association with the  
10 hemofilter, the therapeutic agent to reduce adverse  
inflammatory mediator effects.
